'Fresh from the gardens'

Canadian Anomalies

Following the election of the Great War by the signing of the Armistice, Canada demanded and was accorded a place of equality with other nations of the world at the Peace Conference, and with the creation of the League of Nations, Canada entered that League on exactly the same terms as all other nations. That is to say, Canada was recognized as a nation. And in signing the League Covenant, Canada accepted the responsibilities of a nation.

It is the last Imperial Conference, in London, with all the self-governing Dominions of the Empire and the British Government fully represented, a formal declaration was adopted setting forth that Canada and the other self-governing Dominions were fully autonomous nations within the British Commonwealth of Nations, possessing exact equality with Great Britain.

As a logical outcome of these declarations, Canada has established her own legislatures in certain foreign countries, appointed her own ministers, and, in turn, these countries have named ministers at Ottawa. Thus, as a nation, Canada has direct representation at Washington, Paris and Tokyo. In exactly the same manner as any other country. Equally significant is the fact that the British Government has appointed a High Commissioner to Canada, while Canada maintains a High Commissioner in London.

But while Canada is thus recognized as a nation, it is the only nation in the world which has no nationality of its own, and no distinctive flag of its own. These are anomalies which other people find it extremely difficult to understand.

In England, people born in that country are recognized and officially listed as English; if born in Scotland, they are listed as Scottish; in Ireland as Irish; in France, as French; in Germany, as German; in the United States, as American. Born in Canada, on the other hand, a person may be listed as of any nationality he wishes. He is called Canadian. Officially, there is no such person as a Canadian.

The writer of this article was born in Canada as was his father and mother. His mother's parents were both born in Canada. His father's parents were born in Ireland. His grandparents having crossed to the Emerald Isle from Scotland. So the writer becomes, in Canada, an Irishman although neither he nor his parents ever saw Ireland. If his grandfather had been born in Spain, then the writer would be a Spaniard.

In the face of such anomaly, such a ghastly absurdity, it is little wonder that the people of other countries laugh in the face of any person born in Canada who is bold enough to lay claim to his country being a nation.

Every nation in the world, except one, has a distinctive flag of its own. The exception is Canada. Australia, New Zealand, South Africa, Newfoundland, the Irish Free State all have their distinctive national flags as well as the Union Jack, the flag of all Great Britain and the Empire. Canada has a distinctive flag for its merchant marine, and by Order-in-Council it has been decreed that the shipping flag shall be flown over Canadian Government buildings in the British Isles, and in foreign lands, but it is not officially recognized anywhere else.

Thus, while a Canadian may fly a distinctive Canadian flag over a ship owned by him, he may not fly it over his office building or his residence, and while such a flag may be flown over a Canadian Government building in London, Washington, Paris, or Tokyo, it cannot be flown over a Canadian Government building in Halifax or Vancouver, or anywhere between these two points.

A person born in Canada is, therefore, that peculiar individual among the peoples of the world who has no nationality of his own, and no distinctive flag that he can properly fly in his own land and over his own home and public institutions.

And yet the people of Canada find pride in calling Canada a nation. Why, this so-called nation of Canada has not even the right to amend its own constitution, a power possessed by other self-governing dominions of the British Commonwealth.

Canada is, and is proud to be, and desires to remain, a part of the British Commonwealth of Nations. It is proud of and loyal to the Union Jack as the flag of that great Commonwealth, and will ever retain it. But just as the Dominion has its own Coat of Arms and each Province its Arms, so do each city its Arms, so do the people of Canada desire to establish and retain their own nationality, have their own distinctive flag, and enjoy full autonomy in their domestic affairs.

Such as a native born Canadian may love England, or Scotland, or Australia, or New Zealand, he does not desire to merge his identity or lose his individuality. He is a Canadian and desires to be known as such, not as an Englishman, a Scot, an Australian or a New Zealander.

It is Canada is a nation, let it display the qualities and the insignia of a nation.

Student Aviator Gets Thrill

Fell Out Of Plane But Fortunately Had Parachute

Arthur Carter, automobile dealer and student aviator, of Springfield, Mass., experienced an unexpected thrill when he fell out of his plane while flying 1500 feet over Springfield airport.

Carter, who was flying without a safety belt, but with a parachute, pulled the cord of his parachute and made a landing unhurt. The plane fell in an open field and was demolished.

Reconstructing a Liner

Timber From Many Countries Used On Danish Steamer

Timber of many forests in many countries has been used for reconstruction and redecoration during the seven weeks' overhaul of the White Star liner "Maestri," which recently left Southampton for New York, on her one hundredth west-bound crossing. The varieties of wood included oak, mahogany, teak, beech, ash, saltwood, walnut, green yew and pitch pine, and 40,000 tons of paint was used on interior and exterior work, whilst 15,000 yards of electric wire was used in wiring electric lights and electric lights in cabins of tourist third cabin accommodation.

Women Are Excluded

By the ironical rule of a woman, no woman has entered the gigantic Krupp plant except the former kaiser's daughter. The regulation was laid down by Frau Margarethe Krupp, for years chief director, and continued in force by her daughter, the present owner, Frau Bertha Krupp von Kolden and Hulsbeck.

Five hundred years before the birth of Christ, Hippocrates, a Greek, wrote a book on medical science which is still studied by students in America and Europe.

All Weather Road Promised

From International Boundary To Prince-Albert National Park

An all-weather highway from Regina or the boundary to Prince-Albert National Park will probably be put into condition, F. R. MacMillan, of Saskatoon, president of the Saskatchewan Automobile Association, told members of the Kiwanis Club at Prince-Albert. He thought that this should be the policy of the government, and the fact that a cabinet minister in the Agriculture Government, Hon. J. A. McNeil, was on a trip to the park was in evidence of the government's interest.

HEALTH REGAINED

Mother and Daughters Restored Through the Use of Dr. Williams' Pink Pills

"Contrary to what my friends once thought, I am still living," says Mrs. Norman White, of Canada, U.S. "And I give the credit to Dr. Williams' Pink Pills. I had been suffering for some years. I was weak, run-down, my heart would palpitate violently at the least exertion. I grew so weak that I could not do my housework. I was told by a doctor that I was suffering from no better result. I was told that I was almost hopeless, and I became so weak I was forced to remain in bed. My friends did not believe I could recover. While in this condition a neighbor strongly urged me to try Dr. Williams' Pink Pills. It was like grasping at a straw, but I bought a box and took it for me, and by the time I had taken them I was able to sit up. Another box was sent me, and I was able to go about my health steadily improved. I am now able to do all the work of the house, and I feel my health fully restored. I still take the pills occasionally as a safeguard. My two daughters have also taken the pills, and the most beneficial result. The trouble in both cases was the anemia that so often comes when girls are entering womanhood. Under the use of the pills, their health was regained, strength and activity were restored, and I am sure it is possible for me to praise Dr. Williams' Pink Pills too highly, and to say every word a considerable sum in view of this benefit by my experience."

You can get these pills from any medicine dealer, or from a box from Dr. Williams' Medicine Co., Brockville, Ont.

Escape From Submarine

Men Leave Submerged Craft In Record Time During Experiment

Ten men emerged from the sunken submarine in only thirty seconds during a submarine experiment in Italy, making what is called a world record for such feat. Half the participants used head pieces, while the others wore a specially equipped. The submarine carried a new device consisting of a large bowl beneath a torpedo tube permitting the men to leave the submerged boat without water entering the hull.

A Household Medicine—They that are acquainted with the sterling properties of Dr. Thomas' Electric Oil is the treatment of many ailments would not be without it in the house. It is truly a household friend, as it is effective in dealing with many common household troubles. An inexpensive medicine, so, keep it at hand, as the call for it may come unexpectedly.

What's In A Name?

An Englishman's home is his castle, but whether he is able to call his castle what he likes is a matter of some doubt. The thought arises because the Bank of England officers have decreed that the words "Bank of England" on a building in Bunbury must be removed. The words, carved in bold letters in stone, have adorned this building for over a hundred years. Why they are there on one now.

Her Little Boy Was Very Ill With Summer Complaint

Mrs. Ray Fisher, Lakeland, Sask., writes:—"For over a month, last summer, my little boy was suffering from summer complaint. He got bad there began to be traces of blood in his stool, and anything he ate would not stay on his stomach very long. He became so weak he could not stand up. A neighbor recommended 'DeWitt's Kidney & Bladder Pills' and in a few days he was better. I put up only by The T. Millars Co., Ltd., Toronto, Ont."

W. N. U. 1865

Wheat Grading High

Quality Year In Wheat Production In Saskatchewan

This year is a quality year in wheat production in Saskatchewan. Seven-tenths of No. 1 hard wheat has already been received by the flour mills at Saskatoon. In each of the years 1927 and 1928, there was just one car of No. 1 hard wheat produced in western Canada.

The wheat graded by the Dominion grain inspectors at Saskatoon up to the present time shows a very high proportion of the high grades, as follows:

No. 1 hard, 6 per cent; No. 1 northern, 51 per cent; No. 2, 39 per cent; No. 3, 4 per cent. A part of the No. 2 is garnet wheat to which the No. 1 grade is not given.

At the Moose Jaw inspection point 80 per cent of the wheat is No. 1, 35 per cent No. 2, and the balance mostly No. 3. A. McNeil, of the Dominion seed branch, reports:

This year northern Saskatchewan is growing wheat of equal quality to that grown in the southern part of the province. This is held to be unusual as excess moisture during the growing season in most years makes the northern wheat starchy. The Elrose line is producing a high grade of wheat, and the Elrose and Elrose being outstanding shipping points.

Interested In Peace Garden

Financial Support Promised By Industries In U.S. and Canada

Interest is developing in a proposal of horticulturists of Canada to the United States to establish a Peace Garden between the two countries. The idea has brought expressions of approval from the Governor-General of Canada and Hon. William Phillips, the United States ambassador to the Dominion, as well as from several Canadian politicians of cabinet rank. The heads of many large industrial concerns on both sides of the boundary have promised financial support, and a considerable sum is in view as a nucleus of endowment for the garden.

Certainly it is that a garden of the sort proposed would be a beautiful and fragrant memorial to the war more than a century of peace between Canada and her neighbors, and also an impressive pledge of good will. Its spiritual value at all times would be measured by the degree which it was a symbol of cordial feelings actually entertained by the people of the two countries towards one another and as carried into practice by them. — Regina Daily Post.

Romanian Scientist Designs "Space Rocket"

Hopes To Carry Mail To America In Thirty Minutes

A "space rocket," designed to shoot upward for 32 miles, and is proposed, by the inventor of a rocket, which will carry mail to America in 30 minutes, is to be built at once, it has been learned.

Prof. Hermann Oberth, a Romanian scientist, designed the rocket. It will be built under the supervision of the U.P.A. "Pine Company." Its object, for the first flight, is to measure the physical and chemical properties of the atmosphere. Instruments will be enclosed in it to this end.

Winnipeg Field List

Aviation Club Has Record Of Over Thousand Hours In Air

The rapid growth of all-mindedness in Canada is indicated by the fact that members of clubs in Canada have flown more than 10,000 hours during the last eight and a half months of the year.

The Winnipeg club heads the list with well over 1,000 hours in the air. Toronto comes second with about 1,000 hours, and Ottawa third with just over 800 hours.

One hundred and thirty-two new private, and 57 commercial pilots have graduated from the ranks of the aviation clubs in Canada. In 1928 the figures at the end of the year showed 111 private pilots and 28 commercial.

This year there are 22 clubs in actual operation as against 15 last year.

Artificial Silk From Acetic Acid

Combined With Cellulose Will Make Fine Fabric Is Predicted

Prediction that the sour taste-vinegar will be used to make artificial silk was made to the United States Chemical Society today by Professor D. H. Kyes, of the University of Illinois. The sour substance with which chemistry's scientific touch may make finer dresses was called by Prof. Kyes by its scientific name, acetic acid. He told of a newly-developed process at Illinois for making it, developed in co-operation with H. P. King and Sherlock Swaine, of the university. The making artificial silk it is combined with cellulose to form cellulose acetate.

Externally Or Internally, It Is Good.—When applied externally by rubbing, Dr. Thomas' Colicure Oil opens the pores and penetrates deep, soothing the seat of the trouble and immediately affording relief. Administered internally it will still the irritation in the throat which induces coughing and will relieve affections of the bronchial tubes and respiratory organs. Try it and be convinced.

Makes Ninety Miles An Hour

Moth Plane Fabricated By Prince Is "Pure British"

The Prince of Wales made his first flight as owner of an airplane, to see his father at Sandringham. It is a G. H. Gypsy Moth, priced only \$3,500. The Prince would not buy anything but "pure British." The little Moth makes 90 miles an hour, is painted bright red and blue and carries silver plate marked "H.R.H. The Prince of Wales." The little machine with aluminum nose is upholstered in scarlet leather which can be inflated to avoid bumps.

Millions In Waste

Ford Plants Save Everything From Diamonds To Blotting Paper

Some most unusual items that their way into the revenue-producing scrap heaps at the plants of the Ford Motor Company.

Among these items are a carload of blotting paper each week, a lot of scrap iron and a huge amount of coke. Sale of scrap of all kinds has been settled for company \$2,777.87. This figure represents only scrap that was sold; vast quantities in addition were salvaged and converted into use by the company.

Next to the sale of coke, the largest single item in revenue-producing products is scrap metal. Twenty-eight freight cars on an average pull out of the plants each day loaded with metal shavings and trimmings—about 900 tons. More than half of this represents trimmings from machine shops and is sold to outside mills for conversion into new metal.

The rest of the metal scrap is of the type wasted entirely in open-hearth furnaces and a considerable volume of such waste never leaves the Ford plant, being converted there for further use.

The blotting paper is salvaged after use as a cushion between pieces of glass. It is sold at a value as blotting paper and is re-used.

Scrap is recovered from auto used in the photographic department; diamonds are salvaged from hard cutting tools, and not the least are the left-overs from the wood upholstery. This latter waste is sold to an optical firm to be made into plectrums for eyeglasses.

Established Penny Post

Sir Rowland Hill Recommended Low Rate In 1837

A little over fifty years ago Sir Rowland was presented with the Freedom of the City of London as a hearty acknowledgment of the great service he rendered in the establishment of a penny post. It was in 1837 that Hill published his famous pamphlet recommending that within the United Kingdom the rate for letters not exceeding half an ounce in weight should be one penny. The use of postage stamps was mentioned almost diffidently, for Hill wrote: "Perhaps the difficulties might be obviated by using a bit of paper just large enough to bear the stamp, and covered at the back with a glistening wash which, by applying moisture, might be attached to the back of the letter." The Act empowering the penny post received the Royal Assent in 1839.

Marquis Likes Harvesting

Heir Of Duke Of Montrose Spends Summers On Canadian Farm

A son of a little house with a liking for work is the Marquis of Graham, elder son and heir of the Duke of Montrose. While other young men are sunbathing at Deauville and on the Lido, he comes to Canada to act as a harvester. This is the second year in succession in which for several weeks Lord Graham has elected to put in work on a Canadian farm. He is a nice-looking fresh-faced man of 22, and good at most games.

Pat (to tourist): "We have great athletes in Ireland."

Tourist: "Why, our champion ran 18 miles and then jumped a nine-bar gate."

Pat: "Oh, that's nothing when you think of the run he had at it."

"Dad, ye ken that your hens come over into me garden?"

"I thought they must be daein' that."

"What make ye think so?"

"Because they never come back."

The average weight of a head of hair is from five to twelve ounces.

Wife: "Please come and help. I can't get the truck clamped alone."

Luistig fache, Luistig.

W. N. U. 1805

Marking Pigs For Identification

The Use Of Metal Tags Is The Most Common Practice

Where hogs are kept in large herds it is necessary to follow some sort of marking for identification. One method which is followed by some is that of soldering the date on each pig's ear. Another is to use a similar part of their ears. By means of various combinations of marks quite a large number of different hogs are marked, and subsequently identified. This method is faulty in that the ears may be torn and the marks destroyed. It has another weakness in that it does not serve to identify the individual pigs within the litter. The use of metal tags is a general practice on some farms. These are stamped with combinations of letters, figures, and as each tag has a different combination a ready means of identification is assured. The most satisfactory type is that which is self-identifying, and when inserted in the ear the tag should be inserted in the ear at or before weaning time. This method of marking is undergoing tests at the Experimental Station of the Dominion of Agriculture, at Ottawa, to the use of the tattoo in marking swine officially recognized by the National Pig Association of Great Britain. This method of marking is undergoing tests at the Experimental Station of the Dominion of Agriculture, at Ottawa, to the use of the tattoo in marking swine officially recognized by the National Pig Association of Great Britain.

Since the European corn-borer has been doing damage to corn fields in Canada it has often been confused with another worm, particularly in garden corn, says a Federal Department of Agriculture bulletin. The corn-worm, unlike the corn-borer, works in the ear, eating out the kernels of the cob when at the cooking stage. The caterpillar of the corn-worm when mature is from 1 1/2 to 1 3/4 inches in length. It varies in color from light green to dark brown with rather indistinct stripes on the back and a wider and inconspicuous pale-colored band along the side. Its description is given in Bulletin No. 113 of the Department of Agriculture, Ottawa, by Arthur Gibson, the Dominion Entomologist, and C. R. Twiss, an officer of the Entomological Branch. It attacks the ears of garden corn, feeding on the kernels, particularly those near the tassel. Some years the insect is quite abundant, according to these authorities, at such times it also may be found boring in the fruit of the tomato.

Suggested Economic Parley

Other Dominion Asked Some Time Ago To Meet At Ottawa

Prime Minister Mackenzie King has revealed that Canada some time ago suggested to other Governments of the British Empire that an economic conference be held at Ottawa this year. It was not found possible, however, to arrange for the holding of a conference so soon.

In making their statements the Prime Minister pointed out that Canada would welcome an economic conference in the Dominion "it is exactly what we would wish."

Mr. King. On the other hand, it was the desire of the Dominion to suit the convenience of all parts of the Empire, and if the general feeling of the Dominion is in favor of a conference in London, England, Canada would be prepared to acquiesce. The Prime Minister said that there would probably be an economic conference either here or elsewhere, next year.

Work Horses Shipped East

Saskatchewan Horses Are Shipped To Lindsay, Ontario

Under the auspices of the Saskatchewan Live Stock Pool, and the Provincial Government, an inaugural shipment of carefully selected work horses was made from Maple Creek the other day to the order received by W. Waldron, Markets Commissioner, from J. C. Cameron, Lumber Company, Lindsay, Ontario. These horses are required for bush work, and are young, upstanding, heavy weighted teams, and were inspected by Dr. M. P. McClellan, Veterinary Officer of the Provincial Department of Agriculture. A co-operative horse marketing organization for Saskatchewan has been a long felt want and the need has now been supplied by the formation of a horse marketing division of the Saskatchewan Live Stock Pool, supported by the Provincial and Dominion Departments of Agriculture.

All The Same To Him

His wife had gone to visit her mother, and had telephoned that she would not be returning until the morning.

When she got home, she said to her husband: "You managed to find something to eat last night, didn't you, dear?"

"Oh, yes," he replied cheerily. "I had the steak that was in the pantry and fried it with some onions that I found in the cellar."

"Onions?" she gasped. "Darling, you've eaten my flower bulbs!"

The haberdasher—Yes, sir, these socks will give perfect satisfaction. I've worn them myself for the last two months."

The customer—Have you a pair like them that you haven't worn so long?"

"I fear, did you hear the step-ladder fall?"

"Yes, mummy."

"I hope daddy hasn't fallen?"

"Not yet—he is still hanging by his waistcoat to the picture hook."

Keeps Lonely Vigil

Secretary Of Ancient Cutlers' Company Only Member At Yearly Meeting

Every year on August Bank Holiday (the first Monday in August) the secretary of the Ancient Cutlers' Company, in Hamilton, keeps a lonely vigil at Cutlers' Hall, where he arranges a meeting for members of the company who he knows will never come. They have never come on this particular date.

An Act of Parliament, passed as part of a charter of the Cutlers' Company, says that a meeting of the company shall be held on the first Monday in August every year, between the hour of 1 p.m. and 3 p.m., to elect 24 assistants to the company.

In these days no meeting is held, but to comply with the statutory requirements, provision has to be made for a gathering at Cutlers' Hall. The presence of at least 10 members would be necessary if a meeting took place, for this number is needed to form a quorum. As a result of the war many members were to be altered to avoid the necessity of the secretary attending, a warrant about \$1,000 in legal fees and other charges, and so from one o'clock to three o'clock, the secretary sits and waits the errand members who are probably enjoying their holidays.

Menace To Garden Corn

Worm Destroys Kernels When Cob Near Cooking Stage

Since the European corn-borer has been doing damage to corn fields in Canada it has often been confused with another worm, particularly in garden corn, says a Federal Department of Agriculture bulletin. The corn-worm, unlike the corn-borer, works in the ear, eating out the kernels of the cob when at the cooking stage. The caterpillar of the corn-worm when mature is from 1 1/2 to 1 3/4 inches in length. It varies in color from light green to dark brown with rather indistinct stripes on the back and a wider and inconspicuous pale-colored band along the side. Its description is given in Bulletin No. 113 of the Department of Agriculture, Ottawa, by Arthur Gibson, the Dominion Entomologist, and C. R. Twiss, an officer of the Entomological Branch. It attacks the ears of garden corn, feeding on the kernels, particularly those near the tassel. Some years the insect is quite abundant, according to these authorities, at such times it also may be found boring in the fruit of the tomato.

A Luxury Already

What with airplanes attaining a speed of 220 miles an hour and automobiles whizzing along at sixty and seventy, motorists skimming the waves like a flash of light, how long it is going to be before a quiet stroll is going to be a luxury?

There is no room for trouble in an air castle.

Amalgamated Civil Servants

Here is Fred Knowles, secretary of the Amalgamated Civil Servants of Canada. He is one of the organizers of the body and obtained leave of absence from his job as letter carrier in Vancouver to take over his present job in Ottawa.

A One-Man Newspaper

"Star" Of "The Star" At White Horse, Yukon, Is Kept Busy Mussolini may hold seven or eight columns in Italy, but he has more than a rival in J. D. Skinner of White Horse, Yukon Territory. He is a reporter, porter, advertiser, editor, compositor, printer, mail carrier, publisher and business manager of the White Horse Star. He thinks he says, that his is the only one-man newspaper published in Canada. There may be others—there and elsewhere, but a glance at the issue of July 19, shows a publication free from typographical errors, well edited, and illustrated with various factors in the news, and not the least of which is a photograph of Mr. Skinner himself.

The "Star" of the Star, as revealed by his photograph, shows no signs of the wear and tear which might be expected. Yet, in addition to general news, his July 19 edition contains seven or eight columns of "personals," and all country editors know how much work it takes to compile all these. The overworked who may hear of the gallant Mr. Skinner will with him health and success and look forward to an early day when from the list he gives of his duties, he may at least strike off the one of "sleeping on the floor office."

Lightening The Load

It Canada continues as in the past fiscal year, to devote \$198,022,025 to interest and debt redemption, this country will be free from debt in twenty-five years. Every year the dead weight of interest, having decreased \$22,000,000 since 1921, when the maximum was \$139,531,520 for that year.

The secret of success lies in the man and not in the stuff he works on.

Glue From Sweet Potatoes

Commercial Production For Use On Stamps To Be Undertaken

A new item looms on the horizon of personal liberty—the privilege of sticking stamps that suit the individual taste.

Scientists in the bureau of chemistry and soils have discovered that a high quality starch is obtainable from sweet potatoes. From the starch they have produced a glue of pleasant taste. They are testing its suitability as glue for stationery and stamps.

All that is left to do is to develop a method of economical commercial production. It is to be undertaken this fall, when the sweet potato crop is harvested. Unofficially, it is believed dextrin can be made from sweet potatoes as cheaply as from tapioca, the present source of most stamp and stationery glue.

If it can, and manufacturers are able to pay enough for sweet potatoes to make it worth the producer's time to market such, solution has been found for the tremendous waste that has forced many farmers to quit raising them.

It is estimated that about 20 per cent of the country's average production of 50,000,000 bushels is culled, heretofore available only as feed for cattle and hogs.

Six pounds of sweet potatoes, says Dr. W. B. Skinner, assistant chief of the bureau's chemical and technological research, makes one pound of starch. At that rate he estimates a market for 870,000,000 pounds, or 17,400,000 bushels of sweet potato.

Played Joke On Cambridge

Some Years Ago Students Packed Visit Of Sultan Of Zanzibar

The visit of the Sultan of Zanzibar to Cambridge recently recalled what was probably the greatest hoax perpetrated on any civic authorities. Some years ago it was announced that His Highness would visit Cambridge, and the mayor and corporation turned out in full regalia to pay homage to the distinguished visitor. In due course the royal party arrived, and were received at the Guildhall. It was not until after full honors had been accorded that the councillors learned that they had been entertaining a party of their own students. The misunderstanding was on vacation when the Sultan really arrived.

English Gardeners Value "Toads"

English gardeners are always in the market for live toads, and not infrequently as much as \$25 per hundred is paid for this insect destroyer. It is estimated that every time a boy kills a toad, he is destroying \$100 worth of stock on a farm.

"Harry, I don't believe that you put the toad in."

"Well, if you think I'll fill a jug with a little thing like that, put her out yourself."

Finishing Poultry For Market

Putting Finishing Touches On Poultry Before Offering For Sale

The time would seem to be past when poorly finished poultry can be marketed with profit. Indeed it is held by authorities that putting the finishing touches on market poultry before offering for sale, yields the greatest proportionate return of any labour done on the poultry farm. Well finished broilers or roasters, undoubtedly cost less per pound to produce than those that are poorly finished, and are much more desirable to the consumer.

The past methods of finishing poultry for market are described by Mr. F. C. Elford, Dominion Husbandman, in Bulletin No. 29, of the Department of Agriculture, at Ottawa. Crate feeding, especially for cockerets, is highly recommended, but it is also claimed by Mr. Elford that it will pay to adopt this method with pullets and hens when they are in pullets and dress can be obtained. Feeding is done both in small crates for small flocks, and in feed racks for larger flocks.

In putting in a batch of chickens to be finished, it is best to put in chickens to finish in a large way. To allow them to mix a meal and then to feed sparingly for several weeks. This plan is necessary to avoid indigestion, which has been confined in small quarters after having been accustomed to free range. Crates should be cleaned. Feeding is recommended at this stage. After the birds have become accustomed to confined quarters by means of increasing the feed they should be fed two or three times a day all they will take to take, and after each feeding trough should be cleaned. Plenty of water at all times is necessary and a feed of grit several times a week is advised.

There are many ways of preparing the feed. This bulletin, obtainable from the Dominion of Agriculture, at Ottawa, recommends the use of only ground grain, fed in a wet state. A consistency that it may be poured from the pail or dipped out with a flat ladle. Butter-milk is recommended as the best liquid with which to mix in preparing the feed. When skim milk is used it is recommended to mix it to suit the night and to allow one feed ahead. A little salt added to mash encourages chickens to eat more of the feed. Practically all of the coarse grains are suitable, such as, barley, buckwheat, and wheat, and may be mixed in any combination, but they should be finely ground and the coarse hulls removed. If water has to be used in making of milk in preparing the feed from 2 to 100 parts of cereal and one part of meal should be added to the grain mixture.

Instructions for killing and packing for market are included in the bulletin.

Valuable For Briquettes

Newly Discovered Coal Deposits In Ontario May Be Used For This Purpose

Samples of coal taken from the area at Blacksmith Rapids, on the Alabuta River, where Ontario engineers have discovered extensive deposits, have been analyzed by the Federal Department of Mines experts, and indications are that the coal is of valuable as material for briquettes or briquetted coal.

Considerable treatment would be necessary before it could be of commercial value. However, the samples which the department examined were taken from seams near the surface, and it is believed a better product might be had at greater depth.

"Most men who reach the top of the tree are lonely." It is said. They often sacrifice too many friends on the way up.

"What nonsense is this You have written 'It happens again'—"

"But I had my eye on my friend."

"That is an excuse."—Hummel, Himmels.

Where The Clans Gathered

Layout of the grounds of the Banff Springs Hotel, where the Banff Highland Gathering and Scottish Festival, and the Dominion Track and Field Championships were staged recently. Centre photograph shows the grounds and (1) Piper Hector McDonald, Montreal, winner of first prize for strathspey and reel, second prize for marches and winning the highest aggregate points over the in the open piping contest; (2) Pipe-Sergeant J. K. Cairns, of Hamilton, winner of the trophy donated by E. W. Beatty, chairman and president of the Canadian Pacific Railway, given to any piper of any pipe band officially connected with any unit of the Canadian Militia; (3) Pipe-Sergeant Cameron Highlanders, Winnipeg, winner of the special trophy donated by E. W. Beatty, for the best piper among the delegate pipers from the various Highland regiments of Canada; (4) Lieutenant-Governor W.

Ham, Right, of Alberta, and Lieutenant-Governor of British Columbia, at the Festival.

WORLD HAPPENINGS BRIEFLY TOLD

Great Britain in 1923 had the lowest infant death-rate ever recorded. Out of every 1,000 children who lived to be one year old, only 65 died.

The population of Saskatoon is nearing the 50,000 mark, according to 1920 census of Henderson's Directory. It is now estimated by the publishers that this city has 47,053 residents.

The Aero Arctic Association has announced that financial backing has been obtained for the Arctic expedition of the Graf Zeppelin next spring. Dr. Hugo Eckener, commander of the dirigible, will have 45 persons with him on the flight.

The promotion of Charles Clifton Perry from the post of Indian agent at Vancouver to that of assistant Indian commissioner for British Columbia, at Victoria, has been announced by the civil service commission.

Some of the first issue of Danish cancer stamps have been sent in London. These stamps issued by Denmark to benefit the Danish cancer fund, are in three colors, red, green and blue, in three denominations. All bear the Mercury ward design.

It's just as easy to get wrong numbers at sea now as it is at home. Telephone booths and other conveniences have been built on the steamship Berengaria for regular land communication while the ship is going between England and other countries.

A reward of \$1,000 has been offered by the provincial government for information leading to the arrest and conviction of person or persons in the Doukhobor district responsible for the burning of schools throughout the area. This announcement was made by M. A. MacPherson, attorney-general.

The Newspaper Guide

Advertisements Are To Shoppers What Time-Table Is To Travelers

The newspaper that carries a good line of advertisements is to the shopper what the time-table is to the traveler and the published guide to the tourist. Busy people start to study these advertisements in the home or in the office, and before they start shopping they know where they are going. . . In fact, business places are points of interest to all tourists, and the non-advertiser puts himself outside the pale so far as strangers are concerned.

Edmonton Building Permits

Building permits in Edmonton topped the \$4,000,000 mark this year, up to the end of August, being \$4,168,290 or more than a million above the similar eight-month period of last year.

Extending Radio in Arctic

Husula is rapidly radiating its Arctic possessions. The radio land meteorological station at Franz Joseph Land already is functioning, and another is being constructed on Wrangel Island.

A Bible from the Russian Imperial Palace of Tsarskoye Selo, its cover encrusted with diamonds and emeralds, was recently offered for sale in England.

"Come and sit on my lap, Fritz!"
"But grandma, you are sitting on my yourself!"—Hummel, Hamburg.

Germany Planning World "Plane Lines"

Company Aims For Regular Flying Boat Service Over Atlantic in Two Years

A gigantic network of air lines which will cover the entire world is being planned by Lufthansa, Germany's most important air company. The plans are being worked out by Otto Merkel, who has given up his post as head of Luftverkehr to devote himself to founding an international company, which promises within two years to open regular air lines between Europe and the United States.

Working jointly with the Hamburg-American steamship line, preliminaries have been completed. The details of the new company are still somewhat uncertain, but the approximate direction of developments has been mapped out.

"Not only is the world's interest concentrated in air travel, but in all countries the best technical experts are working out the details," said Herr Merkel. "The experimental stage is behind us and the goal is clear. We have fine 'planes' now, especially in America, excellent motors, and everywhere responsible pilots and dependable instruments which will result in an even higher standard soon."

Device Registers Accidents

New Invention To Help Catch Hit-and-Run Driver

A device to catch "hit-and-run" drivers of automobiles has been made by a Berlin inventor named Rudolf Hofmann. The mechanism is described as "an automatic trigger protector."

It is adjusted under the chassis of an automobile and the instant of any impact automatically raises a white plate with a winking red light above the car's license plate. It also registers the automobile's speed.

Winnipeg Newspaper Union
Festive

The series will consist principally of symphony concerts at most of the following places:

Swedish Leads the World
Sweden tops the world in the number of radio receiving sets, in proportion to its population. The latest statistics show that Sweden has 412,115 sets, or about 8,000,000 inhabitants, or 67.5 for each thousand citizens.

Germany is holding many centenary celebrations this year.

Saving Is Train Haul
Grain shipped from Saskatoon to Liverpool by way of Montreal has to travel 5,215 miles. The grain of Churchill is to travel 3,791 miles. The distance between the two ports and Liverpool is about the same—the saving is in train and lake haulage in Canada and changes and reloading.

WINDOLITE
The Improved
Glass Substitute
COMES WITH A MESSAGE OF HEALTH

The sun is the all-powerful life producer. Nature's universal disinfectant and germ destroyer, as well as stimulant and tonic.

Medical research has definitely proved that from the point of view of health and hygiene, the most effective among the sun's rays are the Ultra-Violet rays, which possess the greatest power for the prevention and cure of disease and debility.

Science has further established that ordinary window glass does not pass the rays of Ultra-Violet rays, so that by using glass we are actually checking these vital health-giving rays.

The inventors of WINDOLITE have conclusively proved that it is the most effective substance in the world that freely admits the Ultra-Violet rays, and that its use has a most beneficial effect on the growth and development of plants and animals, and on the well-being of cattle, enabled for the first time to have healthy light instead of darkness in their sheds.

Indeed, the discovery of WINDOLITE has during the last six years completely revolutionized gardening, given a new stimulus to poultry breeding, increased the egg-laying capacity and fertility of chickens, has greatly improved the health and is now being used in domestic and household requirements.

WINDOLITE stands for 100 per cent. sunlight. It makes light strong windows for cattle sheds, dairy stables, poultry houses, brooders and all out buildings. It is economical, unbreakable, flexible and is easy to cut and fit. It is now being successfully used for sunrooms, verandas, schools, factories, hospitals, nurseries, hot beds, plant coverings and greenhouses. It keeps out cold, does not crack or disintegrate with ordinary paint, and is easy to fit. WINDOLITE is supplied in rolls any length but in one width of 56 inches only. A square yard of WINDOLITE weighs about 14 lbs. with a square yard of glass of ordinary thickness weighs about 135 to 120 lbs. The improved WINDOLITE requires no varnish. WINDOLITE is made in England.

Price \$1.50 Per Square Yard, f.o.b., Toronto.

World Famous Artists On Canadian Radio

HAROLD BAUER

FLORENCE AUSTRAL

Florence Austral, the world's greatest dramatic soprano and Harold Bauer, one of the outstanding pianists of all time, two of the world's famous artists who will be heard on the radio this season during the Imperial Oil Hour of Fine Music, to be broadcast from Toronto every Sunday evening, beginning on October 6th, from 8 to 9 o'clock Central Standard Time. Miss Austral opens the series on Sunday evening, October 6th and Mr. Bauer will be heard on October 20th.

Announcement of a series of concerts by world famous artists on a Canadian radio chain was made yesterday by F. J. Wolfe, Director of Imperial Oil, Limited. The series will begin on October 6th and will continue for twenty-five weeks. It will be broadcast through stations at Montreal, Ottawa, Toronto, London, Waterloo, Winnipeg, Saskatoon, Regina and Red Deer and, with the completion of hook-up facilities at the coast, to Vancouver.

Among the universally known artists who have been engaged for this series are Florence Austral, the world's greatest dramatic soprano; Sophie Braslau, the great contralto; Harold Bauer, one of the outstanding pianists; Richard Crooke, the American tenor who, though only twenty-eight years of age has scored notable triumphs in Europe and America; Lea Lubowitz, who is said to be the greatest of all women violinists; Hans Krieger, the famous Dutch cellist; The London String Quartet; Albert Spaulding, great violinist; Lucila Mallus, one of the most famous contraltos; soprano; Josef Lavigne, the great Russian pianist; Richard Bonelli, leading baritone of the Chicago Opera; The Redoff Quartet, formerly of the Imperial Palace at Petrograd, and others.

The series will consist principally of symphony concerts at most of the following places:

Recipes For This Week

(By Betty Barclay)

GRAPEFRUIT PRESERVE

Remove outer yellow rind and most of the white by peeling very sharp knife cut out the core. Then slice across and place pulp in granite kettle with very little water and cook at moderate heat. When at boiling point, add three-fourths pint of sugar to each pint of fruit pulp and juice, then cook slowly 15 minutes. Seal in small jars.

GRAPE JAM

Stem grapes, wash and press pulp from skins. Place pulp in a kettle, cook until soft, then rub through sieve to remove seeds. Measure and allow one cup of sugar to each pint of fruit. Cook until thick—which will be in a very few minutes. Then pack in clean hot jars and seal carefully.

Everybody Was Fleeced

He was in London for the first time, and his uncle, a Scotchman, was showing him round Throgmorton Street.

"Why is that little fat man winking and whispering to all those others?" asked the visitor.

"Oh," returned his uncle, "he's just bought in the stock of an oil company dirt cheap."

The visitor looked about him and noticed another man who was also whispering and chuckling to some friends.

"What is he so pleased about?" he asked his uncle.

"Oh," was the reply, "he's the man who sold the stocks."

Putting Her Right

A little girl carrying two kittens to school, but her way, so accented a passing rustic thus:

"Excuse me, but is this the way to Oldham?"

"No, miss," came the ready response, "you want to take 'em by the scruff of the neck!"

Tall Men's Association

Crusader Is Trying To Make Path
Easier For His Elongated
Brethren

Things are coming to a sorry pass for tall men, Benjamin Ostling of Marshfield, Ore., president of the Tall Men's Association, of America, indicated on a visit to Cleveland.

The tall man suffers one agony after another, in Ostling's opinion, and the more he has to travel the more his troubles mount. For instance, take the Pullman berth, the standard size hotel bed and the regulation size bath tub.

Ostling is a crusader for the man who towers into the atmosphere six feet or more, and he firmly believes that the Tall Men's Association will accomplish something worth while in the way of added comforts.

The organization, formed in 1925, has nearly 1,000 members, most of them from the west coast, but Ostling predicts a steady increase during the next few years. Before one is taken into this select group, he must first of all, which can be easily be done with a yardstick. The only requisite is that he must be at least six feet tall.

Tall men have to comb their hair, fix their neckties, and do their hair-fishing touches to their dressing on the standard plan basis. The furnishings in his room are of the standard size, said Ostling. "Just try to imagine me taking a bath in the standard size tub. It just cannot be done. When a tall man sits at a regular sized table, all the pleasure he gets is gone because the gymnast has to have to perform to keep his legs from bumping those of the table."

"The worst sufferers are, of course, tall men who are compelled to stay at hotels and sometimes months in hospitals. The regulation hospital bed is not too large for the man of average height. Can you imagine a tall man comfortable in them?"

"The time has come when institutions catering to guests must take into consideration the tall man's plight and make provisions for their comfort."

Several hotels in the larger cities have provided special accommodations for their tall guests. Most hospitals on the western coast have at least one of these beds in each building for their tall patients, and a hospital has even a special operating table for tall men.

Ostling said there are at least 2,000,000 six-footers on the continent. And the ramifications of Ostling's campaign are not limited, because he even advocates larger jail cells for his more unfortunate brethren.

Take Off Over-weight

Modern science says—sugar supplies energy that lets you carry on with less food, and safely reduces weight.

WIGLEY'S is pure chiclet sugar and pure. Chewing the chiclet dissolves the sugar and releases the flavor.

In this pleasant way you get needed body fuel and reduce the pounds.

Remarkable Self-Denial

Scottish Girl Saves Enough To Bring Family To Canada

After having been only two years in Canada, Miss Jean Turley, late of Coalburn, Lanarkshire, Scotland, has been able to bring her father, mother, and ten brothers and sisters to join her in the home which she has prepared for them in Montreal.

By denying herself every luxury—she has never been inside a picture show in Canada—and saving every cent of her wages as a servant, Miss Turley was able to save part of the large family's passage money, the remainder being provided by the British Dominions Emigration Society.

Miss Turley's father found work difficult to obtain in Lanarkshire, but jobs in Montreal have been promised to all members of the family old enough to undertake them.

Speaking of the sacrifices which she had made for her family, Miss Turley said:—"It is all over now, and I am very glad to see them."

Interesting Local Items

At the stock show in Calgary last week John Stephens of Calgary won the prize in the professional sheep trimming class.

A. N. Collard had two of his brothers from Saskatoon visiting him over last week end. They motored over.

Mr. Ed Waller was confined to his home for a few days this week regaining strength after having all his teeth extracted.

Dr. Gershaw, M. P. for this constituency, addressed the Liberal Club of Calgary on Tuesday evening of this week.

Seven car loads of cattle and sheep will be shipped from Alberta for the Toronto winter fair and the Chicago shows.

Afghanistan has had four kings in the past year. Probably that's why some other countries are trying to produce four flying aces.

Mr. Jim McKenzie and his bride arrived in town last Sunday from their honeymoon. Mr. and Mrs. McKenzie will reside on Fifth street.

Keep in mind the chicken supper and dance too be given in Cliff Hall on Monday, Nov. 11th, under the auspices of St. Mary's Altar Society. Supper will be served from 5:30 to 8:30. Dancing after the supper.

The regular monthly meeting of the local Legion will be held in their club rooms on Sunday afternoon next at three o'clock. As much business of importance will be up for discussion and officers are to be elected, a full attendance is desired.
